BEFORE INSTALLING THE SPOUT OUTLET

Turn hot and cold supply handles to the full open position. Flush out the lines for at least one minute to clean out any construction debris (particles of solder, copper chips, pipe dope, teflon tape, etc.). After flushing shut-off water at faucet and assemble spout outlet to the faucet spout.

MAINTENANCE

When performing routine maintenance, do not void your warranty by installing non-genuine parts. Use only authorized Cambridge Brass parts. After any maintenance, remove the spout outlet, turn handle(s) to the full open position, and flush lines for one minute. This will remove debris from lines which can damage internal parts of faucet and create leaks. After flushing, shut off water at faucet and reassemble spout outlet.
