

# H17 Series BASO® Automatic Shutoff Pilot Gas Valve

The H17 Series automatic pilot valves provide safe lighting and complete shutoff in the event that the flame heating the thermocouple is extinguished. They are designed for standing pilot applications and can be used with natural gas and Liquefied Petroleum (LP) gas. Depressing the reset button allows gas to flow to both the pilot and main burner. Applications include room heaters, infrared heaters, stand-alone portable heaters, catalytic heaters, refrigerators, and similar applications.

H17 models are also available with a higher ambient temperature, up to a maximum of 300°F (149°C), for use on commercial ovens, broilers, and other applications.

Features and Benefits	
<input type="checkbox"/> <b>Compact Design</b>	Permits installation in dimensionally restricted applications
<input type="checkbox"/> <b>Versatile Mounting</b>	Allows easy access to the reset button for lighting
<input type="checkbox"/> <b>Reliable</b>	Proven by thousands of units in service

## Product Overview

### Application

The H17 Series valves provide complete shutoff in the event that the flame heating the thermocouple is extinguished. They are suitable for use with natural gas, LP gas, or LP gas-air mixtures at pressures up to 0.5 psi (35 mbar). The H17 is suitable for operation over a temperature range of -40 to 150°F (-40 to 66°C) for standard models. High temperature models are suitable for operation over a temperature range of -40 to 300°F (-40 to 149°C).

### Description

H17 valves are compact, straight-through aluminum valves with pipe sizes from 1/8 to 1/2 inch.

H17 valves do not have a flow interrupter, therefore, gas flows to both the main burner and pilot burner (if used) when the reset button is depressed. Where a pilot is not used, the pilot outlet is omitted and the tip of the thermocouple is inserted directly in the main burner flame.

### Mounting

H17 valves may be mounted in any position. This permits the reset button to be located in the most accessible location.

## Technical Specifications

<b>Product</b>	H17 BASO Automatic Pilot Valves
<b>Maximum Operating Pressure</b>	0.5 psi (35 mbar)
<b>Valve Body</b>	Aluminum
<b>Permissible Ambient (Surface) Temperature</b>	(-40 to 150°F) (-40 to 66°C) standard models (-40 to 300°F) (-40 to 149°C) high temperature models
<b>Recommended Thermocouple Lead Lengths</b>	K15: 12 to 48 in. (305 to 1,220 mm) K16: 12 to 72 in. (305 to 1,830 mm) K19: 18 to 72 in. (457 to 1,830 mm)
<b>Inlet/Outlet Pipe Size</b>	1/8, 1/4, 3/8, and 1/2 in. NPT
<b>Types of Gas</b>	Natural, Liquefied Petroleum (LP), or LP gas-air mixtures
<b>Packaging</b>	Bulk pack supplied to original equipment manufacturer (individual pack optional)
<b>Bulk Pack Quantity</b>	60
<b>Bulk Pack Weight</b>	27 lb (12 kg)
<b>Agency Listing</b>	CSA (AGA, CGA) Certificate Number 229521-1656088 UL File Number MH2926 (H17AA, BA, and CA only)
<b>Specification Standards</b>	ANSI Z21.20, CAN1-6.4 ANSI Z21.21, CSA 6.5 UL Standard 372
