

**FURNACE MOUNTED
HUMIDIFIERS**

Introduction

Why an Air King Furnace Mounted Humidifier?

Humidification is a very important part of your home's comfort level. A furnace mounted humidifier is an efficient and effective way to humidify your entire home.

Protect your home

Dry conditions can cause damage to furniture and woodwork from cracking and shrinking. By keeping your home at a comfortable humidification level you not only make a better living environment for yourself, but also for your furniture and floors. Humidified air will also reduce the amount of static electricity in your home.

Ease of Operation

With portable humidifiers you need to find a place to locate them and they are usually only effective for a few rooms at the most. They also require constant refilling and an electrical outlet. A furnace mounted humidifier installs directly on the furnace, has an automatic water supply and will deliver humidified air to each and every room in your home.

Quiet Operation

Since the humidifier is located on your furnace, you do not have the constant noise that you have with a portable humidifier. With the Air King Flow-Through style humidifier, there is no motor. It uses the air flow from your furnace to operate, making the operation almost silent.

Lower your heating bill

Moist air feels warmer than dry air; therefore, increasing the humidity makes your home feel warmer. This will allow you to set your thermostat at a lower temperature, which in turn will help lower your heating bill.

Humidify for Health

Most doctors will agree that a properly humidified home creates a better living environment. Humidification will help protect you against dry skin and other symptoms associated with dry air.

Flow-Through Humidifiers

Maximize the comfort level of your home by adding the Air King model AK5500 Flow-Through Humidifier to your furnace.

The Air King Model AK5500 Flow-Through Humidifier features our unique Flow-Through technology. The Flow-Through action provides a clean and effective way to humidify your home by constantly rinsing the evaporative pad. The rinsing action also reduces the number of times the evaporative pad needs to be replaced in comparison to traditional furnace mounted humidifiers. The unit automatically cycles with the furnace and a power indicator light will let you know when the unit is operating.

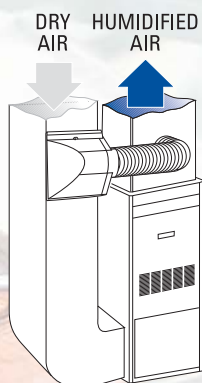

- 12 Gallon output per day, humidifies up to 3200 sq. ft.
- Easy left or right hand ducting and no hard wiring to the furnace blower is necessary
- Built-In Heat Sensor
- No pans, drums or floats to clean or replace
- * Uses evaporative pad model number RFL10

HUMIDISTAT IS INCLUDED WITH THE UNIT

HOW IT WORKS:

Water flows continuously through the filter. DRY AIR picks up moisture as it is forced through the filter, returning fresh, HUMIDIFIED AIR to your home.

Maximize the comfort level of your home by adding the model AK7000 Flow-Through Humidifier to your furnace.

The Air King Model AK7000 Flow-Through Humidifier features our unique Flow-Through technology. The Flow-Through action provides a clean and effective way to humidify your home by constantly rinsing the evaporative pad. The rinsing action also reduces the number of times the evaporative pad needs to be replaced in comparison to traditional furnace mounted humidifiers.

- 18 Gallon output per day, humidifies up to 4800 sq. ft.
- Easy left or right hand ducting and no hard wiring to the furnace blower is necessary

Drum Style Humidifiers

Efficiently and effectively add comfort to your home with the addition of the Air King model AK4500 Drum Style Furnace Mounted Humidifier.

The Air King Model AK4500 Drum Style Furnace Mounted Humidifier creates a comfortable living environment. Our patented seamless polyurethane pad assures steady, even drum rotation and will never separate. The cabinet is constructed of clear, high temperature plastic that never rusts and allows you to see that the unit is operating.

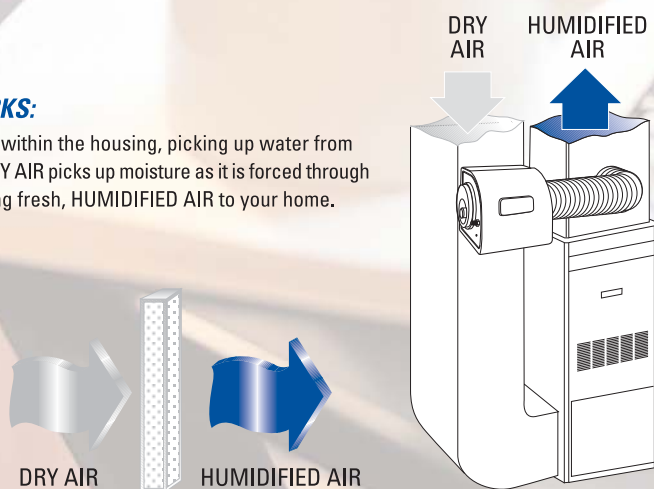

- 15.4 Gallon output per day
- Humidifies up to 4000 sq. ft.
- Easy left or right hand ducting
- Easily removable, high temperature thermoplastic water pan
- Patented one piece adjustable float valve
- High temperature plastic cabinet
- * Uses evaporative pad model number P-94

HUMIDISTAT IS INCLUDED WITH THE UNIT

HOW IT WORKS:

The filter rotates within the housing, picking up water from the water pan. DRY AIR picks up moisture as it is forced through the filter, returning fresh, HUMIDIFIED AIR to your home.
