Features and Benefits

The Robertshaw® Air Pressure Sensing Switches now include Pneumatic Switches, Air Pressure Sensing Switches and Manual Reset Switches. These reliable devices are designed to replace a wide variety of switches found in residential and light commercial applications.

- All Air Switches come in a contractor kit that includes the hardware, replacement hose and an adjustment tool for easy installation and calibration.
- These switches include features such as factory-calibrated and factory-fixed set points, NEMA rated housings, manual resets and gold contacts.
- Select Air Pressure Sensing Switches are practically insensitive to temperature change with an operating range of -40 °F to 190 °F.

Typical Applications

- Conditioned air filters that accumulate particulate matter used to sense the differential pressure or airflow drop across the filter.
- Defrost cycle is initiated by sensing differential pressure or airflow drop across the refrigeration coils when they ice.
- On gas-fired units, the switch senses draft down from the blower; switch actuation allows ignition start-up or system shutdown upon insufficient draft.
- On air-supported structures and enclosures, sensing switches ensure proper inflation or internal pressure; switch actuation controls the blower to maintain pressure.
- Exhaust fans and fume hoods employ switches to sense draft down from the exhaust fan; switch actuation signals condition upon fan failure of insufficient draft.
