New Design

*Original Design
(with notches)*

*New Design
(without notches)*

The 9010 and 9010P refrigerator water filters have a new design. Although the new design looks different, please be assured that filters with this new design will fit in your refrigerator and will provide you with the same great tasting filtered water and ice as the original design.

If, for any reason, you experience difficulty installing a filter, you may need to reinsert it gently at different rotations until the filter engages properly. If necessary, please remove the exterior grill from the base of your refrigerator to allow for easier access to the filter housing.

For questions, please contact customer service department at 1-800-469-4663.

For best results, remember to **replace your water filter at least every 6 months.**
