UNIVERSAL LINT TRAP ULT-180

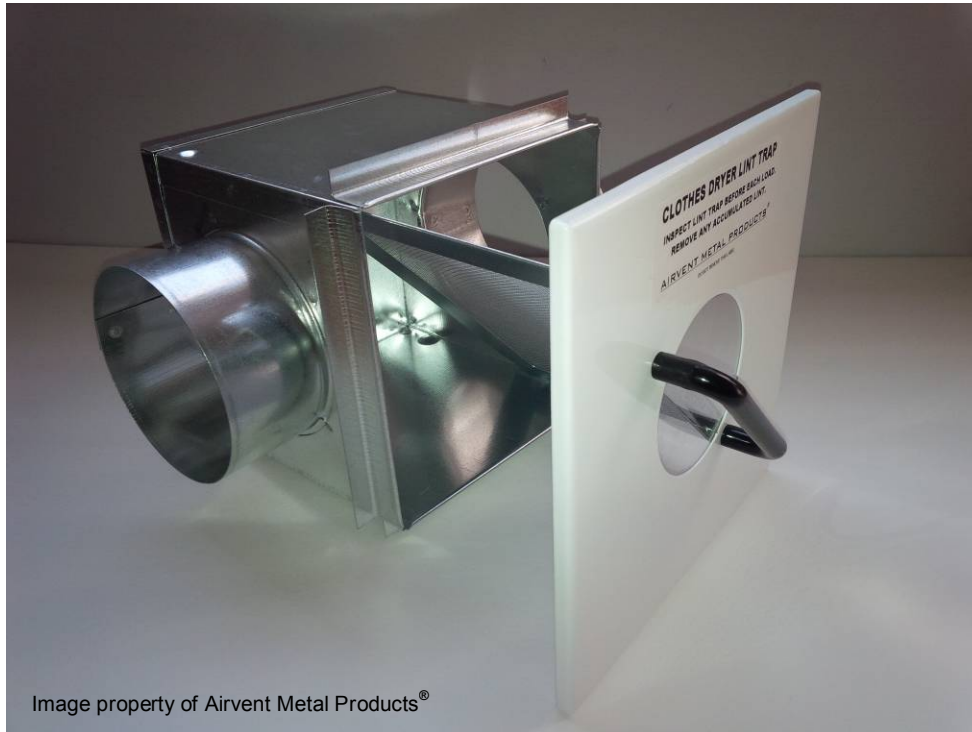

Image property of Airvent Metal Products®

INTELLECTUAL PROPERTY
LAW PROTECTED

With over 100,000 trouble free installations of the original ULT-180 in North America, Airvent Metal Products® ULT-180 series of Lint Traps have been arguably the most duplicated product in the market segment. We were the first to diagonally oppose the filter screen to the airstream in a metal frame increasing the efficiency of the filter medium while reducing pressure loss. Our latest improvements include a screen with safety edge all around, easier single hand operation and all field replaceable components. **BUYER BEWARE!** Some manufacturers use satin coat steel that is oily. These oils become tacky over time and can potentially contribute to lint build up in the housing. Insist that the housing is bright galvanized steel G40 or better.

Advantages:

- All galvanized steel construction
- Easy for homeowner to use and maintain
- Reducing call-backs and complaints
- 4" inlet and outlet standard
- Available with 4" inlet and 5" - 6" outlets
- Door and screen can be completely field serviced with factory parts without special tools
- Accommodates 5/8" fire code drywall
- Housing fits in a 2 x 6 stud wall
- Available with appliance white door

Choose **AIRVENT METAL PRODUCTS®**

Because products that work should not be optional™
