

LightsOut™

BedBug Detector

A more ***attractive choice*** for bed bug detection

No tape.
No talc.
No breakage.

LightsOut™ is the latest innovation in bed bug detection. It is used to detect the presence of bed bugs in a structure by simply placing the device under the legs of beds, upholstered furniture, etc. **LightsOut™** will intercept bed bugs as they move around in search of a blood meal.

This Cutting-edge interception device was developed by leading bed bug expert *Jeffrey White of BedBug Central*. Preliminary tests have shown **LightsOut™** to be both a highly effective interception device and aesthetically pleasing compared to other devices currently on the market.

LightsOut™

BedBug Detector

Features

**Black Is Shown To
Attract BedBugs**

**Guards To Keep Bed
Wheels Stable**

**Reinforced
Center**

**Powderless
Deadfall Trap**

LightsOut™
BedBug Detector

VS

**Other Interception
Devices**

What is the difference between LightsOut™ & other like devices?

LightsOut™

- Black color is:
 - Attractive to bed bugs
 - Allows easier identification of early instars
- No additives or powder necessary to trap bed bugs
- Crack & break resistant due to stronger grade of plastic
- Textured exterior surface eliminates need for unsightly tape

Competitive Devices

- Frequent breakage due to inferior plastics
- Most commonly white in color
 - Does not blend well with furniture
 - Makes identifying of early instars difficult
- Uses messy powders with a degree of maintenance
