To Our Valued Customers

**Re: Taymor Door Closers**  
**"Swinging Fire Door Closers Certified for Canada"**

This is to confirm that all Taymor closers bearing the c-UL mark are certified as meeting the requirements for swinging fire door closers certified for Canada.

See our cut sheets at [www.taymor.ca](http://www.taymor.ca) for further details, including reference to "UL and c-UL listed compliant UL10C for positive pressure" etc.

Note that not all accessories and applications are considered fire rateable. For example, the addition of a hold-open arm to any closer invalidates the fire rating of the opening, as NFPA80 requires that fire doors always close (and also that they positively latch, which is why fire rated exit devices do not have a dogging function, etc). The closer's function as a part of the rated door opening is to ensure the door is closed after each opening, at which point the closer's function is complete and the latch creates the 'seal' between door and frame.

Please note that this letter is for informational purposes only, and the c-UL mark on the closer itself is the only valid indication of fire listing.

Do not hesitate to contact us with any questions at all.

Thank you for choosing Taymor!

Yours truly,

A handwritten signature in dark ink, appearing to read "SG", is written over a solid horizontal line.
