

OPERATING INSTRUCTIONS

BEFORE USE:

READ ALL OPERATING INSTRUCTIONS BEFORE USE. Use extreme caution when checking electrical circuits to avoid injury due to electrical shock. GB Instruments assumes basic knowledge of electricity on the part of the user and is not responsible for any injury or damages due to improper use of this tester.

OBSERVE and follow all standard industry safety rules and local electrical codes. When necessary call a qualified electrician to troubleshoot and repair the defective electrical circuit.

SPECIFICATIONS:

Operating Range: adjustable from 12-600 VAC, 50-60 Hz, CAT III 600V

Indicators: Visual and Audible

Ambiente Operativo: 0-32° F (0 - 32° C) ; 80% RH max., 50% humedad relativa sobre 30° C

Altitud de hasta 2000 metros. Uso en interiores.

Grado de contaminación 2 según IED-664.

Cleaning: Remove grease and grime with clean, dry cloth.

Operación:

Before use test the battery by rotating the dial on the top side of the tester to the "on" position. If the battery is good then the light will flash and speaker will chirp momentarily. If indicators do not function then replace the battery. This unit operates from a 2-1.5V batteries LLR-44, A/76, G13, AG13, SR44W, V13GA, GP76A.

To test for voltage - This unit has an adjustable dial on the top of the unit. To increase the sensitivity rotate the dial clockwise. Increasing the sensitivity increases the detection range of standard 120 VAC circuits. See Fig. 1 and Fig. 2

Place sensor on or near the wire, device or circuit to be tested. If AC Voltage greater than the adjustable setting of 12-600 VAC is present the light will flash and the speaker will beep continuously.

Fig. 1

Fig. 2

Static Electricity - The tester is subject to electrical static interference. If the LED or tone activates a single time, it is detecting the static electricity in the air. When detecting voltage, the LED and tone will activate repeatedly.

Warning - To assure the unit is operating properly, always test on a known live circuit before use.

Warning - This tester will not detect voltage in wires that are electrically shielded by metal conduit or grounded electrical enclosures.

Do not place hand past LED window.

Caution - REFER TO THIS MANUAL BEFORE USING THIS TESTER.

Double Insulation: The tester is protected throughout by double insulation or reinforced insulation.

Warning - This product does not sense potentially hazardous voltages below 50 volts. Do not use outside of the marked/rated ranges indicated.

Warning - To ensure the unit is operating properly, always test on a known live circuit before use.

Warning - This tester will not detect voltage in wires that are electrically shielded by metal conduit or grounded electrical enclosures.

Do not place hand past LED window.

Caution - The tester is protected throughout by double insulation or reinforced insulation.

Warning - This product does not sense potentially hazardous voltages below 50 volts. Do not use outside of the marked/rated ranges indicated.

Warning - To ensure the unit is operating properly, always test on a known live circuit before use.

Warning - This tester will not detect voltage in wires that are electrically shielded by metal conduit or grounded electrical enclosures.

Do not place hand past LED window.

Caution - The tester is protected throughout by double insulation or reinforced insulation.

Warning - This product does not sense potentially hazardous voltages below 50 volts. Do not use outside of the marked/rated ranges indicated.

Warning - To ensure the unit is operating properly, always test on a known live circuit before use.

**INSTRUCCIONES DE OPERACIÓN
ANTES DE USAR:**

LEA TODAS LAS INSTRUCCIONES OPERATIVAS ANTES DEL USO. Tenga sumo cuidado al revisar los circuitos eléctricos para evitar lesiones debidas a choques eléctricos. GB Instruments supone el conocimiento básico de la electricidad por parte del usuario y no es responsable de ninguna lesión ni daños debido al uso incorrecto de este probador.

OBSERVE y siga todas las reglas estándar de seguridad de la industria y los códigos eléctricos locales. Cuando sea necesario llame a un electricista capacitado para resolver problemas y reparar el circuito eléctrico defectuoso.

ESPECIFICACIONES:

Rango Operativo ajustable entre: 12-600 VCA, 50-60 Hz, CAT III 600V

Indicadores: Visuales y sonoros

Ambiente Operativo: 0-32° F (0 - 32° C) ; 80% humedad relativa máx., 50% humedad relativa sobre 30° C

Altitud de hasta 2000 metros. Uso en interiores.

Degrado de contaminación 2 según IED-664.

Limpieza: Retire la grasa y la mugre con un paño seco y limpio.

Sensor: Remove grease and grime with clean, dry cloth.

Operación:

Before use test the battery by rotating the dial on the top side of the tester to the "on" position. If the battery is good then the light will

flash and speaker will chirp momentarily. If indicators do not function then replace the battery. This unit operates from a 2-1.5V batteries LLR-44, A/76, G13, AG13, SR44W, V13GA, GP76A.

To test for voltage - This unit has an adjustable dial on the top of the unit. To increase the sensitivity rotate the dial clockwise. Increasing the sensitivity increases the detection range of standard 120 VAC circuits. See Fig. 1 and Fig. 2

Place sensor on or near the wire, device or circuit to be tested. If AC Voltage greater than the adjustable setting of 12-600 VAC is present the light will flash and the speaker will beep continuously.

Fig. 1

Fig. 2

Electricidad estática - El probador está sujeto a interferencia estática eléctrica. Si la luz o el tono se activan una sola vez, está detectando la electricidad estática en el aire. Al detectar voltaje, la luz y el tono se activan repetidamente.

Advertencia - Este producto no presenta los voltajes potencialmente peligrosos debajo de 50 voltios. No utilice fuera de las gamas marcado/valorados indicadas.

Advertencia - Para asegurar que la unidad esté funcionando debidamente, siempre pruebe con un circuito energizado conocido antes de usar.

Advertencia - Coloque la mano sin pasar el límite del indicador LED.

Advertencia - Este probador no detectará voltaje en alambres que estén eléctricamente protegidos mediante portacables de metal o alojamientos eléctricos puestos a tierra.

Garantía de 1 año La garantía se limita a la reparación o reemplazo, no se ofrece garantía de comerciabilidad ni idoneidad para ningún fin en particular. El producto está garantizado como exento de defectos en materiales y de mano de obra durante la vida útil del mismo. Bajo ninguna circunstancia será GB Instruments responsable de daños fortuitos o consecuentes.

Este unidad está protegida por las siguientes patentes estadounidenses: 5,877,618

INSTRUCCIONES DE FONCTIONNEMENT

AVANT L'UTILISATION:

BIEN LIRE TOUTES LES INSTRUCTIONS D'UTILISATION AVANT L'USAGE. Il faut faire extrêmement attention quand on vérifie les circuits électriques pour éviter les blessures causées par un choc électrique. GB Instruments présume que l'utilisateur a une connaissance de base de l'électricité et n'est pas responsable des blessures ou dommages causés par un mauvais usage de cet instrument.

RESPECTER et suivre toutes les règles normales de sécurité de l'industrie et les codes d'électricité locaux. Quando sea necesario llame a un technicien qualifié pour dépanner et réparer le circuit électrique défectueux.

ESPECIFICATIONS:

Plage de Fonctionnement: réglable de 12 à 600 V.c.a., 50-60 Hz, CAT III 600V

Indicateurs: Visuels et sonores

Environnement de Fonctionnement :

0 à 32° C 80% H.R. max.,

50% H.R. au-dessus de 30° C

Altitude jusqu'à 2000 mètres. Pour usage à l'intérieur.

Degré 2 de pollution, conformément à IEC-664.

Nettoyage: Retirer la graisse et saleté avec un chiffon propre et sec.

Fig. 2

MODE D'EMPLOI:

Avant l'utilisation, testez la batterie en faisant tourner le bouton de réglage sur le dessus du testeur à la position « on ». Si la batterie est bonne, le voyant clignote et le haut-parleur émettra une alerte sonore, momentanée. Si les indicateurs ne fonctionnent pas, remplacez la batterie. Cet appareil fonctionne à partir de 2 batteries 1,5 V LLR-44, A/76, G13, AG13, SR44W, V13GA, GP76A.

Pour vérifier la tension - Cet appareil possède un bouton de réglage sur le dessus de l'appareil. Pour augmenter la sensibilité, faites tourner le bouton dans le sens antihoraire. Augmenter la sensibilité augmente la plage de détection des circuits 120 V.c.a. standards. Placez le capteur sur ou près du fil, appareil ou circuit à tester. Si hay tensión c.a. más grande que la configuración ajustable en la c.a. presente, el voyant clignotera y el haut-parleur émettra un pitido continuamente.

Fig. 1

Fig. 2

Électricité statique - Le vérificateur est susceptible de parasites électrostatiques. Si la DEL ou l'avertissement sonore se manifeste une seule fois, l'appareil a détecté de l'électricité statique dans l'air. Quand l'appareil détecte une tension, la DEL et l'avertissement sonore fonctionnent de façon continue.

Double isolation: L'instrument est entièrement protégé par une double isolation ou une isolation renforcée.

MISE EN GARDE - CONSULTER LE PRÉSENT MANUEL AVANT D'UTILISER CET INSTRUMENT.
