

OASIS® Water Coolers

...available with the VersaFilter System

Offering unparalleled performance and flexibility with maximum contaminant reduction

OUR OASIS® WATER COOLERS WHEN EQUIPPED WITH THE VERSAFILTER FILTRATION SYSTEM:

- Provide a flexible water treatment solution, which effectively reduces chlorine, odor, lead and cysts.
- Improve the taste and appearance of drinking water
- Offer the highest performance in the most "user friendly" package available

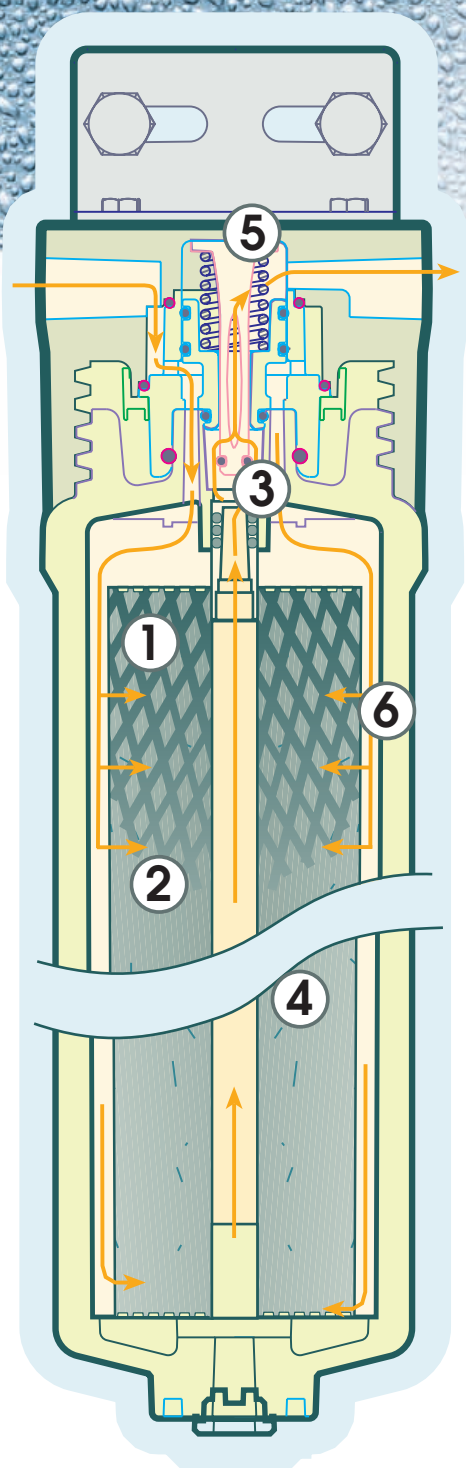

The multi-purpose VersaFilter filtration system is factory installed on many OASIS® water coolers. It is also available as a replacement system for your existing OASIS® water cooler.

The Word for Water Coolers Worldwide®

OASIS® VersaFilter

Our innovative filter design gives you a clear advantage.

- ① Spun polypropylene prefilter wrap extends the life of the filter by protecting the media from premature plugging due to sediment.
- ② Unique formulation of powdered carbon plus a patented lead reduction media for high performance filtration. Compression molded into a tight block for maximum contaminant and cyst reduction.
- ③ Triple O-Ring seal ensures no bypass.
- ④ Radial flow-through filter design utilizes entire media area for maximum performance and minimal pressure drop.
- ⑤ Patented shut-off valve engages automatically as filter is inserted or removed.
- ⑥ Self-contained sealed cartridge ensures that hands do not touch the filter media reducing the potential for introducing bacteria.

The OASIS® VersaFilter is easily accessible from inside the cooler for fast and easy filter changes. An automatic shut-off inside the filter eliminates the need to locate the water valve. Durable constructed, VersaFilter is designed to last 1,500 gallons or approximately six months.

Tested and certified by NSF International to comply with NSF 42 and 53 standards

- Reduces chlorine by 97% (ANSI/NSF 42)
- Reduces lead between 95.9% and 99% (ANSI/NSF 53)
- Reduces cryptosporidium and giardia cysts by 99.99% (ANSI/NSF 53)
