

USER'S GUIDE

RWF SERIES WALL FAN HEATER

REPLACEMENT COMPONENT LIST INCLUDED

This unit complies
with the CSA
standards

WARNING

Before installing and operating this product, the user and/or installer must read, understand and follow these instructions and keep them handy for future reference. If these instructions are not followed, the warranty will be considered null and void and the manufacturer deems no further responsibility for this product.

This product must be installed by a qualified person and connected by a **certified electrician**, according to the **electrical and building codes** effective in your region.

The following instructions must be adhered to in order to avoid personal injuries or property damages, serious injuries and potentially fatal electric shocks.

Protect the heating unit with the appropriate circuit breaker or fuse, in accordance with the nameplate.

Make sure the line voltage (volts) is consistent with that indicated on the unit's nameplate.

This unit must be **grounded**.

Switch off the power at the circuit breaker/fuse before installing, repairing and cleaning the unit.

Make sure the unit is appropriate for the intended use (if needed, refer to the product catalog or a representative).

RECOMMENDED HEATING CAPACITY:

1,25 W/cubic foot (0.03 m³)

This corresponds to **10 W/square foot (0.09 m²)** based on a standard ceiling height of 8 feet (2.44 m). The recommended capacity is usually sufficient for normal heating needs. Please note that the insulation quality of walls and windows is one of the factors that contribute to heat losses, which modify the required capacity to heat a room. If needed, refer to a specialist who will be able to calculate these heat losses and optimize the required capacity or consult the Heating calculator section of the Stelpro website (residential buildings). To heat a large room and increase your comfort, consider installing several units instead of one. For example, 2 X 1000 W rather than 1 X 2000 W.

If the unit's capacity is insufficient for the size of the room, it will operate continuously and may become defective earlier and turn yellow.

Do not install the unit where objects or furniture could be heat damaged.

Respect distances and positions indicated in the installation section.

If the installer or the user modifies the unit, they will be held responsible for any damage resulting from this modification, and the CSA certification could be void.

This unit must not come into contact with a water source and must be protected from splashes (e.g. a wet mop). Do not use it if any part has been immersed. Moreover, do not turn it on or off when standing in water or if your hands are wet.

When mounting the unit, make sure that the anchorage used can support the total weight of the unit and mounting brackets.

When cutting or drilling into a wall, make sure not to damage electrical wiring and other hidden utilities.

Do not install this product on walls made of synthetic material such as, but not limited to, carpet and wallpaper.

When starting up the unit for the first time or after a long period, it is normal that it produces some temporary odours and whitish smoke.

Because this unit is hot when in use, it may pose risks even in normal operation. Therefore, be careful and responsible when using it. To avoid burns, do not let bare skin touch hot surfaces. Let the unit cool down for a few minutes before handling it (it stays warm for some time after shut-down).

This unit must be installed at least 8 in (20.3 cm) from any adjacent surfaces (walls and floors). However, make sure flammable objects or furniture do not come into contact with the unit and keep them at least **12 inches (30.5 cm)** from it. Failure to comply with this warning could lead to a fire. Some materials are more heat-sensitive than others, so make sure those near the unit can withstand heat.

Do not install on a wall behind a door.

Never block the unit's air vents. This obstruction could lead to overheating, which could result in a fire.

Do not insert or allow foreign objects to enter any air vent as this may cause electric shocks, fires or damages to the unit.

This unit has hot and arcing or sparking parts inside. It is not designed to be used or stored in wet areas or areas containing flammable liquids, combustible materials or corrosive, abrasive, chemical, explosive and flammable substances such as, but not limited to, gasoline, paint, chlorine, sawdust and cleaning products. Store it in a dry place.

Some areas are dustier than others. Thus, it is the user's responsibility to evaluate if the unit must be cleaned based on the amount of dirt accumulated on and inside air vents. Accumulated dirt can lead to a component malfunction or discoloration (yellowing). It may cause a fire if not installed and maintained in accordance with these instructions.

The thermal protection activation indicates that the unit has been subjected to abnormal operating conditions. If the thermal protection remains activated or activates and deactivates repeatedly, it is recommended that a qualified electrician or a certified repair centre examine the unit in order to make sure it is not damaged. (Refer to the limited warranty).

If the unit is damaged or defective, cut off power supply at circuit breaker/fuse and call a certified repair centre. (Refer to the limited warranty.)

Make sure that all the electrical connections are secure and have been made properly. Pull each wire to ensure it is not loose in the connector or terminal board as this may cause a fire.

If an option must be added, make sure it has been approved by Stelpro. This way, you'll be sure it has been tested in accordance with our safety rules and that the unit has an appropriate setup built into it.

Note: When a part of the product specification must be changed to improve operability or other functions, priority is given to the product specification itself. In such instances, the instruction manual may not entirely match all the functions of the actual product. Therefore, the actual product and packaging, as well as the name and illustration, may differ from the manual.

SPECIFICATIONS AND NAMEPLATE

WALL FAN HEATER	
MODEL	RWF
VOLTS	120, 208, 240/208, 277, 347 V
WATTS	500 TO 2000 W
WEIGHT	6 LB/2.7 KG
DEPTH	3 3/16"/80 MM
WIDTH	8 11/16"/220 MM
HEIGHT	17 1/8"/435 MM

The nameplate is located at the bottom of the unit's housing.

TECHNICAL DRAWINGS

INSTALLATION

WARNING: Cut off power supply at circuit breaker/fuse before proceeding to installation.

Make sure that the supply voltage (volts) matched the voltage on the nameplate (see diagram on p. 3).

- An installation powered by a 120 V circuit has a power cable made of white and black wires.
- An installation powered by a 240 V circuit has a power cable made of black and red wires.

WARNING: This unit must be installed at least 8" (20 cm) from adjacent walls and the floor.

INSTALLATION OPTIONS

RECESSED INSTALLATION

FIG. 3

RECESSED INSTALLATION

1. Drill the wall as shown above. The opening in the wall must be adjacent to a housing anchor.
2. Remove the grille by unscrewing the two (2) screws (FIG. 1).
3. Remove the mechanical housing by unscrewing the four (4) screws (FIG. 2).
4. Place the housing at the desired depth in the opening. Press it firmly onto the anchor and secure it with two (2) nails or screws. Remember to account for the thickness of the finished wall when you install the housing. The edge of the housing must be flush with the wall surface (FIG. 3).
5. Open a knockout in the housing to pass the power cable.
6. Pass the power cable through the housing. Install a wire clamp and insert the cable, leaving at least 6" (15.2 cm) of cable inside the housing to facilitate wire connection. Tighten the wire caps to ensure the connection is secure.
7. Secure the inner part of the housing by tightening the four (4) screws removed in Step 3.
8. When wall finishing is complete, screw the grille back on using the two (2) screws removed in Step 2 (see FIG. 1). **Be sure to install the grille in the correct direction. The (A) opening must always face the fan blades and the (B) opening the hot air outlet. If the grille is installed upside down, the unit will stop working.**

FIG. 1

FIG. 2

WARNING: You must set the wall thermostat to fan heater mode as soon as you restore power. If the thermostat stays in baseboard mode, the fan heater will run intermittently and may overheat.

INSTALLATION OPTIONS

INSTALLATION WITH A SURFACE CABINET

INSTALLATION WITH A SURFACE CABINET

1. Remove the grille by unscrewing the two (2) screws (FIG. 1).
2. Remove the mechanical housing by unscrewing the four (4) screws (FIG. 2).
3. Open the input knockout that will be used, then pass the power cable with a connector through it.
4. Place the housing against the wall, level it, then screw in place with four (4) wood screws (not supplied) using the holes provided for this purpose (FIG. 3).
5. Replace the mechanical housing and make the required electrical connections. Tighten the four (4) screws removed in Step 2 (FIG. 2).
6. Insert the sleeve around the frame using the guides (FIG. 4.1) located below it, then screw it to the wall using four (4) screws (not supplied) in the semi-circular cut-outs provided for this purpose (FIG. 4).
7. Screw the grille back on using the two (2) screws removed in Step 1 (FIG. 1). **Be sure to install the grille in the correct direction. The (A) opening must always face the fan blades and the (B) opening the hot air outlet. If the grille is installed upside down, the unit will stop working.**

WARNING: You must set the wall thermostat to fan heater mode as soon as you restore power. If the thermostat stays in baseboard mode, the fan heater will run intermittently and may overheat.

FIG. 4.1

MAINTENANCE

N.B. In order for the warranty to be valid, the unit must be cleaned regularly. **WARNING:** If the unit is equipped with a circuit breaker, the power supply at the main breaker must be turned off before removing the cover of the junction box or to open or close the unit's circuit breaker.

Cut off power supply at circuit breaker/fuse before cleaning the unit. Use a soft rag for dusting. When cleaning, use only a damp rag and non-abrasive dish soap. If you use a cleaning product, always wipe the product off properly to avoid the discoloration of the unit. Do not use abrasive or chemical cleaners because they can damage the finishing. If the unit is used in a very dusty location, use a vacuum brush to remove dust and other foreign objects from the grilles. Note that cigarette smoke could yellow the discharge grille and that the best way to prevent this problem is to clean the unit regularly.

Do not use cleaning products identified with these symbols:

N.B. Note that there is electrical current to the unit even if the thermostat is off, which means that there is a risk of electric shock as long as the unit is energized.

TROUBLESHOOTING

PROBLEM	DEFECTIVE PART OR PART TO CHECK
The unit does not work.	<ul style="list-style-type: none"> Defective thermostat or wrong thermostat setting Open circuit breaker or fuse Activated thermal protection Faulty connections
The unit runs continuously.	<ul style="list-style-type: none"> Defective thermostat or wrong thermostat setting Heat losses greater than the unit's capacity
The enclosure is extremely hot.	<ul style="list-style-type: none"> Defective thermal protection Blocked air vents Defective motor
The unit cycles under control of the thermal protection (overheat indicator).	<ul style="list-style-type: none"> Blocked air vents Defective motor
The unit is overheating.	<ul style="list-style-type: none"> Defective thermostat or wrong thermostat setting Defective motor
The breaker trips when the heater is turned on.	<ul style="list-style-type: none"> Faulty connections Voltage higher than indicated on the nameplate
Elements are on, but the motor does not work.	<ul style="list-style-type: none"> Defective motor
The desired room temperature cannot be reached.	<ul style="list-style-type: none"> One or more defective elements Defective thermostat or wrong thermostat setting Voltage lower than indicated on the nameplate Heat losses greater than the unit's capacity

N.B. If you do not solve the problem after checking these points, cut off the power supply at the main electrical panel and contact our customer service (see the "Limited warranty" section to obtain the phone numbers).

REPLACEMENT COMPONENT LIST

REF. #	PART #	DESCRIPTION
1	BOUT-009	WHITE THERMOSTAT BUTTON
1	BOUT-010	BLACK THERMOSTAT BUTTON
4	M-RWF13Z*	GRILLE
5	BLA-001	BLADE 5" 27" 4B
6	MO-001	MOTOR 1250-2000 W (208/240 V)
