PVC FOAM MAT CLEANING & MAINTENANCE

APPLICABLE PRODUCTS

Airsoft™ Anti-Stat, Airsoft™ Checker, Airsoft™ Pebble, Airsoft™ Plus, Airsoft™ Ribbed, Airsoft™ Safety, Foam Fusion™, Kneezeez

consequential damage, loss or expense involving the use or misuse of these instructions.

ROUTINE MAINTENANCE - PVC Foam

For best results Edgewood Matting recommends that these products be swept, vacuumed or blown off with compressed air daily (both the top of the mat and under the mat). To abide by any applicable warranty, the maintenance schedule must be adjusted to keep the surface adequately clear of debris so as to not cause unnecessary wear. The cleaning schedule varies depending on the environment it is being used in, for example an office may be once a week where as a carpentry shop would be daily.

For removing more difficult dirt/stains dampen a cloth with warm water (mild detergent may be added). Do not scrub or use stiff brushes on the mat.

PRECAUTIONS

PVC foam products should never be exposed to excess water or other fluids, occasional spills are acceptable but must be cleaned up immediately. No mat should be left submerged in any fluid, mats should be kept dry at all times to avoid mold and mildew development. Avoid exposing any mat to harsh chemicals or oils.

DISCLAIMER

These instructions are based upon and believed to be best practices, but are still guidelines and do not imply liability for Edgewood Matting Ltd. It is the responsibility of the purchaser to properly maintain the mat and to abide by any regulations or laws applicable to them and the business they operate. Edgewood Matting Ltd. shall have no obligation or liability for any incidental or
